Section 5. General Water System Information

Background Information

Under a revegetation plan approved by the City of Edmonds, native vegetation has been planted along the banks of an unnamed tributary to Shellabarger Creek. These plantings will enhance the current stream buffer and assist in providing a habitat for birds and small mammals. This tributary, however, is located at the bottom of a steep ravine. As a result, nearly all of the new plantings are located on the slopes of the ravine, making the plants dependent on supplemental watering during the summer months.

Intended Use of Proposed System

The intended use of the water extracted to the creek is to irrigate ground cover vegetation (Beach Strawberries and Kinni-Kinnick) and shrub layer vegetation (Red Current, Oso Berry, Snowberry, Oregon Grape, and Nutka Rose) during the dry summer months to insure that these plants produce fruit for wildlife consumption.

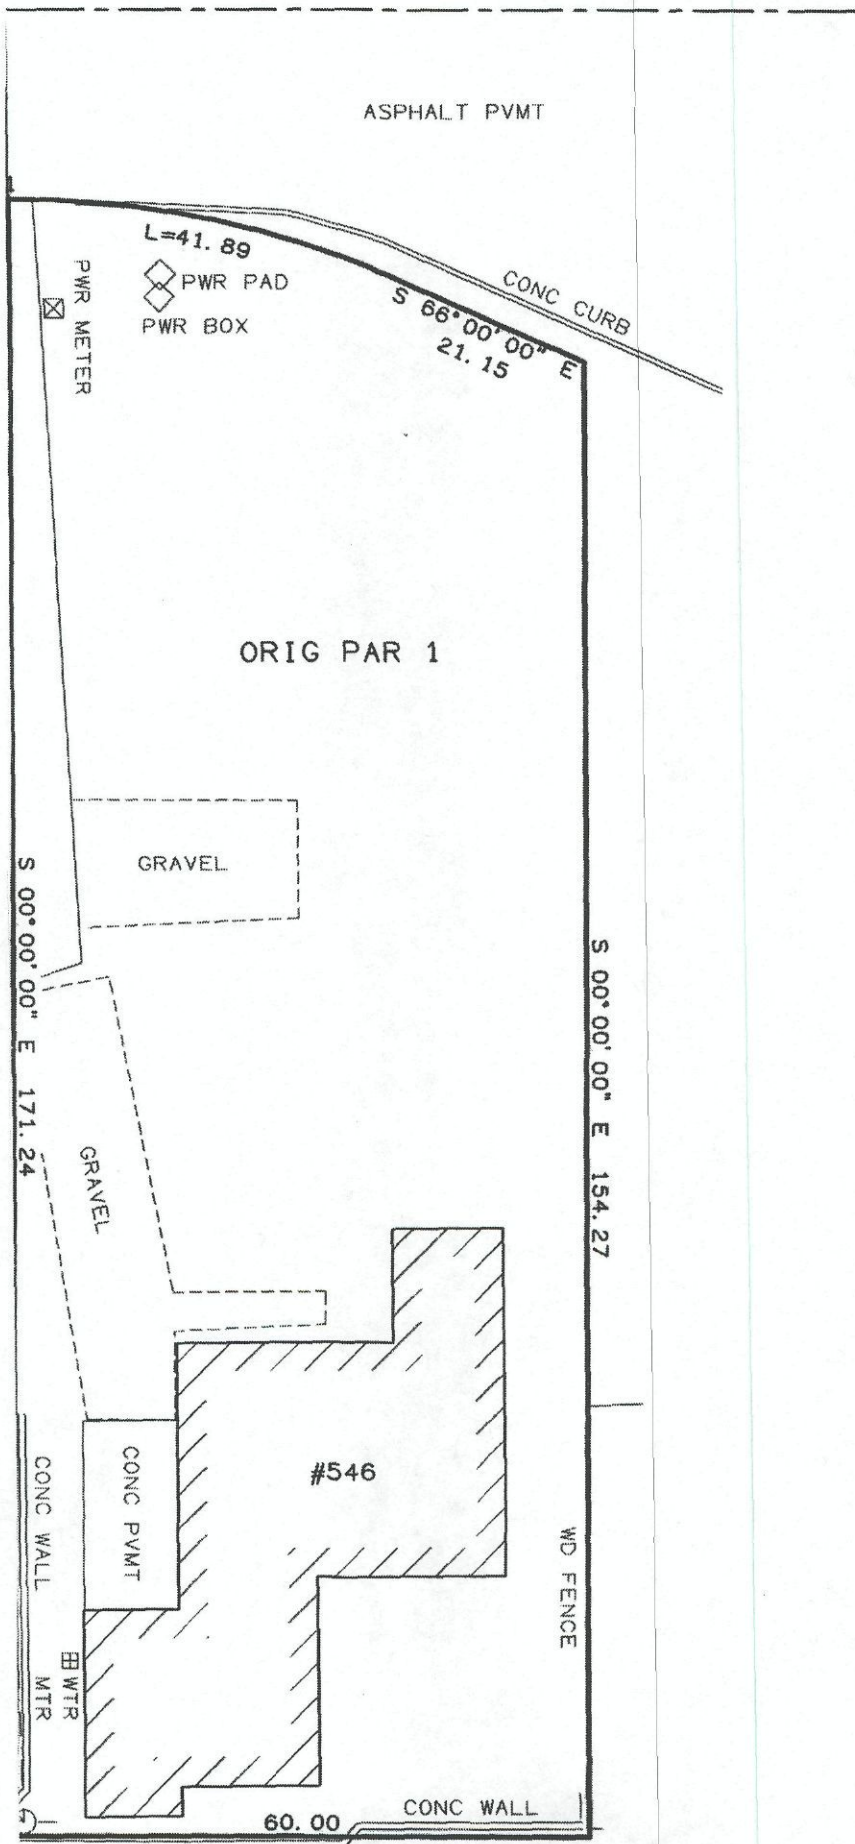

Proposed System

Overview: A 1" PVC line with a screened end would be placed into the stream near the culvert entrance with the other end of the line connected to a lawn sprinkler pump located at the top of the ravine near an existing electrical meter/distribution box. A 1" PVC discharge line would run along top of the north side of the ravine which would feed 3 sprinkler heads. These sprinkler heads would be used to irrigate the north slope of the ravine. All of the 1" PVC pipe would be buried 6" below ground.

Pump: 1/2 HP Sprinkler Pump, 9.3 GPM

Sprinklers: Pop-Up Impact Sprinkler, 2.6 to 3.6 GPM
